

Ariadne

A personal command center for long-running work — track projects, tasks, dependencies, and documents, then roll status up to management.

[Daily review](#)[Dependencies](#)[Document library](#)[Reports by tag](#)[Runs locally](#)

Secure sign-in

A lightweight gate — a single userid and password — so the workspace isn't changed by accident on a shared machine. Not a hardened security boundary; the point is peace of mind. Your data persists locally between visits.

The image shows a web interface for a sign-in system. At the top center is the Ariadne logo, which consists of a blue square with a white spiral icon, followed by the word "Ariadne" in a bold, black, sans-serif font. Below the logo is a white, rounded rectangular card. Inside the card, the text "Welcome back" is displayed in bold, followed by "Sign in to your project workspace." in a smaller font. There are two input fields: "Username" with the text "admin" and "Password" with masked characters ".....". Below these fields is a blue button with the text "Sign in". At the bottom of the card, it says "Demo credentials — admin / admin". Below the card, centered on the light gray background, is the text "Runs locally · your data stays in this browser".

Command Center — your daily review

The first thing you see each day: everything that needs attention now, across every project — overdue, due today, blocked, and due this week — beside a live portfolio with progress and next-due dates. The Work / Home filter (top right) keeps personal and professional work separate, and an ambient banner flags anything overdue or critical.

Calendar & upcoming

Due dates laid out by month, colored by priority, alongside an at-a-glance "Upcoming" list. Click any item to jump straight into the task.

Work

DONE THIS WEEK	PLANNED NEXT	BLOCKERS / AT RISK
—	- New onboarding wireframes Today - Prototype in Figma in 5d	- Prototype in Figma in 5d - Eng scoping & estimates in 7d

A admin Sign out

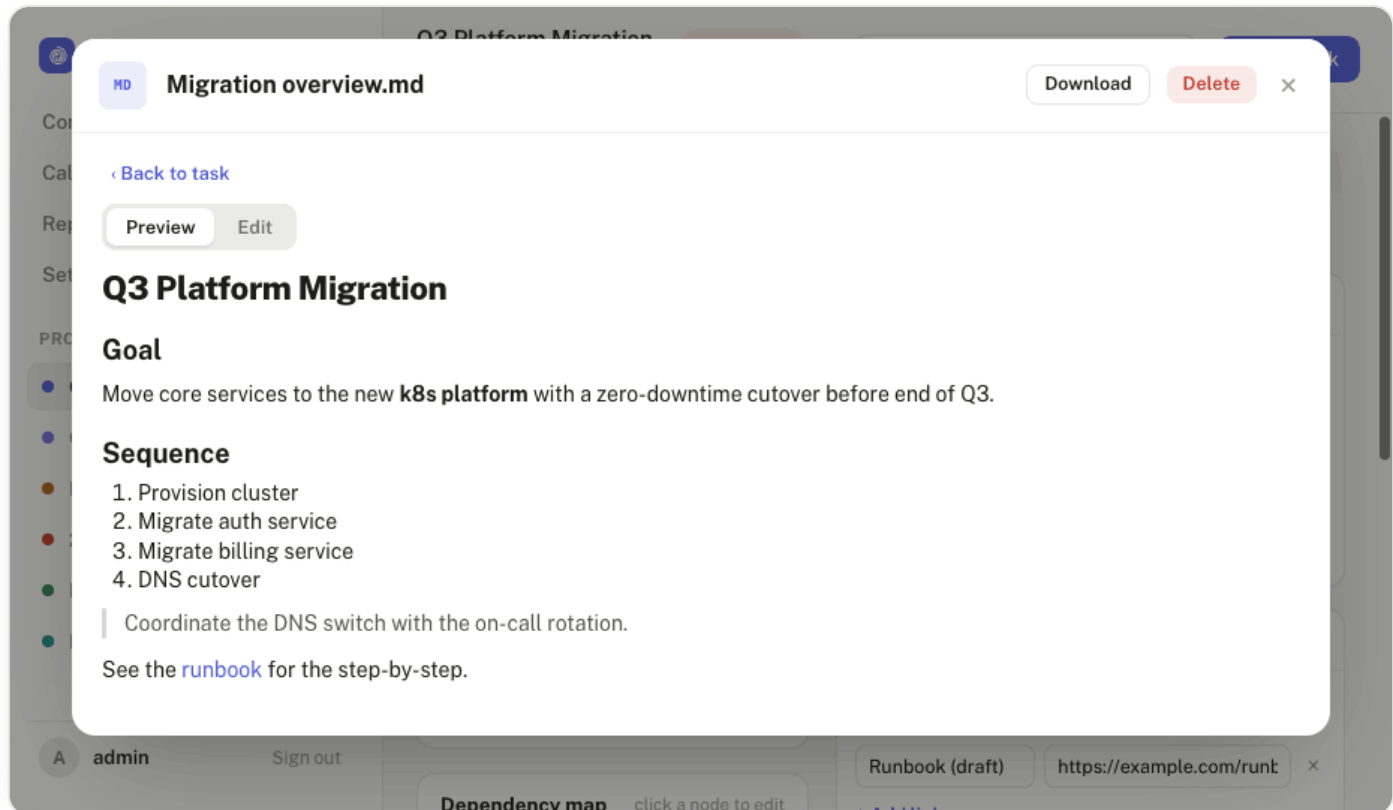

Everything about a task, in one editor

Status, priority, due date, tags, free-text notes, subtasks, dependency mapping ("blocked by"), attachments, and links — all editable in place and saved instantly. Dependencies drive the "blocked" warnings surfaced on the home screen.

Per-project document library

Stash reference material with each project: write editable markdown notes, or upload PDF, CSV, DOCX, XLSX, PPTX, RTF, and images. The app previews what the browser can (markdown, PDF, CSV tables, images) and offers download for the rest. Files attached to a task also appear here automatically.

Prototype notes: data is stored in-browser; Todoist sync is mocked; the working prototype and a developer handoff package accompany this document.
